(a) quine: $\hat{\alpha} = 1.27$, priors agree
posterior density
dispersion α
PH(0, 1, 2, 1)
Ga(0.01, 0.01)
Ga(2, 1)
$\hat{\alpha}$
(b) Insurance: $\hat{\alpha} = \infty$, priors disagree
density of $\log_{10} \alpha$
dispersion α (log scale)
(c) Insurance: 90% predictive bands
claims
Ga(2, 1), 90% band
PH(0, 1, 2, 1), 90% band
observed claims
policy cell, ordered by fitted mean
(d) Insurance: mixing of α
α
mean parameterization, ESS = 16669
Algorithm 2, ESS = 5
iteration
